

CASE STUDY

Save the Children

Enabling Secure Collaboration

Save the Children is a UK based charity with the vision of attaining the rights, survival and protection of children all over the world. Last year alone the charity helped 7.8 million children and raised a total of £291.5 million.

objectives

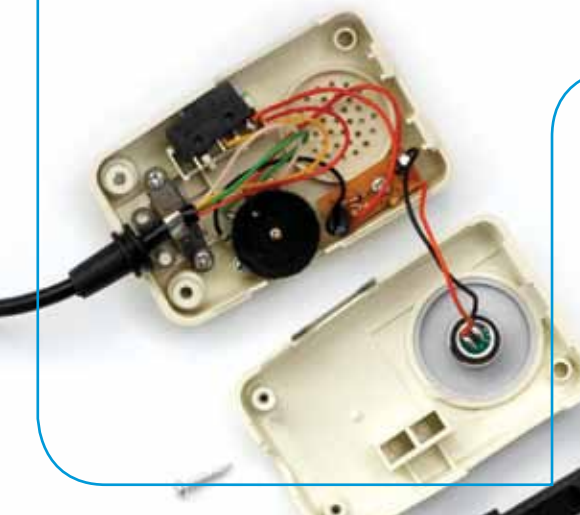

- Working across third world countries and conflict zones, the charity sought to implement an Internet-based communication tool which would deliver a cost-effective and accessible means of collaboration for employees, volunteers and partner agencies around the globe
- To identify the business case, threats and define a roadmap for secure deployment, that mitigates risk to the charity's people, processes and technology

solution

- An assessment of the collaboration tool and its use; measuring the criticality of the charity's data estate, network and security infrastructure and usage scenarios, and mapping this across the impact of the new technology
- A report complete with risk assessment, best practice for protecting data, network architecture changes and enforced security measures to prevent breaches and advice on an acceptable usage policy

benefits

- Objective and professional consultancy services that developed a clear roadmap for adopting secure global collaboration tools
- Confidence that new IM and communication tools would not impact the integrity of the organisation's data or increase the threat of internal leakage and external attack

“ When it comes to security, it made sense to get experts in to make absolutely sure we had a complete view of how to balance any new security risk with the promised benefits. The niu team worked quickly and professionally and provided a report that has given us a roadmap to secure and efficient technology adoption.”

Peter Banks, Finance Director at Save the Children

niu know how

niu provides IT and telecoms know how.

When we say know how, we mean inside-out, top to bottom know how. We dissect your problems so we can piece together bespoke solutions. In a marketplace littered with IT and telecoms providers, we know that few if any, companies can offer the breadth and depth of expertise that is inherent within niu.

At niu we really do know how.

- application services
- desktop services
- compliance & security services
- server & storage services
- voice & video services
- data network services
- mobile network services
- data centre services
